US Dollar	(USD)	1.07120	= 1 (EUR)

**Note on risk**

There is a risk that, due to the formation of market prices on illiquid markets, the valuation prices of certain securities may differ from their actual sales (valuation risk).

The value of a unit is calculated by dividing the total value of the investment fund inclusive of its income by the number of units. The total value of the investment fund is to be determined by the custodian bank on the basis of the respective market values of the securities, money market instruments and subscription rights forming part of it plus the value of the financial assets, amounts of money, credit balances, claims and other rights less liabilities forming part of the fund.

The net assets are determined according to the following principles:

- The value of assets that are quoted or traded on a stock exchange or another regulated market is generally determined on the basis of the last available price.
- If an asset is not quoted or traded on a stock exchange or another regulated market or if the price of an asset quoted or traded on a stock exchange or another regulated market does not adequately reflect the actual market price, the prices supplied by reliable data providers or, alternatively, the market prices for equivalent securities will be taken or other recognised valuation methods employed.

**Transactions concluded during the reporting period if they are no longer stated in the statement of assets**

Purchases and sales of securities, investment units and promissory note loans (market attribution as of the reporting date)
